

You've just been rear-ended. **Minutes later,** your claim is **settled.**

It's raining, you're shaken — you open the app and just talk. Filed, policy verified, adjuster assigned, reference number in your inbox. **No hold music.**

No forms. No back-and-forth. That's **Glass Box AI** — five specialist agents settling an auto claim from first notice to payment, on 100% Microsoft Azure.

CYCLE TIME

**~3 wks →
min**

First notice to settlement on a clean claim

COST TO SETTLE

25–30% ↓

Lower loss-adjustment expense per claim

AUTOMATION

>90%

Of personal-lines claims can settle straight-through

COMPLIANCE

100%

Decisions auditable in plain English — compliant by design

Product: Glass Box AI

100% Microsoft Azure

Live, working demo

Presented by Sameet · distributed team

THE PROBLEM

Filing a claim today is slow and painful — and it's bleeding the industry.

22 days

the average wait to settle a car claim

104%

insurers pay out more than they take in — 3 years running

\$45B

lost to insurance fraud every year

\$170B

at risk as fed-up customers switch insurers

Slow claims lose customers; weak checks lose money to fraud. It all starts at that first call — and that's exactly where we step in.

OUR SOLUTION

Five specialist agents settle the claim, end to end.

Every step is logged in plain English to an auditable trail — our "Glass Box" — so the system is compliant the moment it ships.

LIVE DEMO

Watch one claim settle — in real time.

- Switch to the live app: Sarah files by talking → the agents decide → the adjuster approves → a real email lands in her inbox, payment on the way.

ARCHITECTURE · 100% MICROSOFT AZURE

The engine under the agents.

All provisioned in one Azure tenant — the email you just saw was sent live from Azure Communication Services. (Show the rg-glassbox portal.)

WHY GLASS BOX AI WINS

Different by design — **precise,** and **built to scale.**

WHAT MAKES US DIFFERENT

The only Glass Box

- **Every** decision logged in plain English — auditable from day one, not bolted on. Built to Colorado SB21-169, NAIC & NY DFS.
- **Plug-and-play — no front-end rebuild.** API-first: drops straight into the carrier's existing app, inside their own Microsoft tenant. No new vendor, no rip-and-replace.
- **Human-in-the-loop by design** — AI settles the routine, escalates the rest. Never an opaque autopilot.

HOW PRECISE

Grounded • scored • cross-checked

- **RAG with citations** — the Policy agent answers from the actual policy document, not a guess. No hallucination.
- **Confidence-scored every time** — $\geq 90\%$ auto-settle, 60–90% to an adjuster, $< 60\%$ human escalation.
- **Five agents cross-validate** — extraction → coverage → fraud & fact checks → adjudication, each traceable to evidence.

HOW SCALABLE

Flat cost at 100M+ policies

- **Indexed store + Azure AI Search** — indexed seeks, not generative scans: latency & token cost stay flat as data grows.
- **Serverless + parallel agents** — elastic by default; thousands of claims process at once.
- **Enterprise Microsoft backbone** — Dataverse, Functions & Power Automate scale to carrier volume.

OUR IP · PROPRIETARY BY DESIGN

We engineered the hard parts — **not** assembled off-the-shelf.

★ **Patent-pending — the Glass Box decision-rationale method:** a regulation-mapped, plain-English audit record written automatically on **every** agentic decision (input → reasoning → confidence → outcome), queryable as a compliance artifact. The audit layer is the product, not a log file.

CUSTOM ENGINEERING

Confidence-tiered adjudication

- Our calibrated scoring + deterministic routing — $\geq 90\%$ auto-settle, 60–90% adjuster, $< 60\%$ escalate. The decision methodology is ours, not a stock template.

CUSTOM ENGINEERING

Multi-agent cross-validation

- Five specialist agents that hand off and check each other — extraction × coverage × fraud & fact — our orchestration graph and prompt design.

CUSTOM ENGINEERING

Flat-cost scale layer

- A service layer + indexed policy store so agents never scan the system-of-record — flat latency and token cost at 100M+ policies.

BUSINESS IMPACT · WHAT OUR SOLUTION DELIVERS

Faster, cheaper, and it keeps customers.

**Days →
min**

Time: straight-through settlement on clean claims

McKinsey "Insurance 2030"

25–30%

Cost: lower loss-adjustment expense per claim

McKinsey "Claims 2030"

\$80–160B

Fraud: P&C savings from AI across the lifecycle by 2032

Deloitte, 2025

~\$40M

Proven: one US insurer's auto-claims rebuild — 3-day cycle cut, 92% satisfaction

Deloitte case study

Resource: agents handle the routine; adjusters focus only on Tier-2/3 exceptions. Same team, far more throughput.

ROADMAP & GO-TO-MARKET

From auto claims to any regulated decision.

NOW

Auto claims, full agentic pipeline, real
Azure stack

NEXT

Live industry feeds (ISO, NICB,
CARFAX...), voice intake, Teams adjuster

THEN

Underwriting, lending, benefits — same
agentic + audit layer

Plug-and-play: ships on the carrier's [existing](#) Microsoft tenant and integrates into their current app — [no front-end rebuild](#), no new vendor risk, no rip-and-replace. We sell speed and compliance as one product.

THE ASK

Settlement in minutes. Trust that's **auditable**.

AI agents that settle the routine, escalate the rest, and prove every decision
— on a 100% Microsoft stack.

Our ask: a pilot on synthetic claims through the full pipeline.
